ProService

Service means functioning smoothly

ProService is the EDP-specific security against malfunctions. Suitable solutions at the right time.

At this point this explains, why ProLogic substantially favours software-support for FenOffice-user-programs. Deviating from the classical „emergency offers“ with the creation of our support structure consists in paid attention to meet all problem areas overall and be able to fulfill most individual requirements.

The power spectrum reaches from the hard and software consultation, over the setup in network and operating systems, the installation and briefing into your user software up to training course and advanced training seminars. With the inclusion of remote maintenance to the ranges telephone-hotline and suburb-service, which corresponds to the actual sense of communication connection.

Use this experience for your competition advantage.

Support-hotline

on-the-spot service

Remote maintenance

Further development of software and training seminars

Update arrangement and product advice

Software solutions dovetailed to fit

FenOffice

ProAdmin

**Administration
means
to sort
and
organise**

ProAdmin is the versatile instrument for your complete office organisation. An optimal solution for your enterprise.

ProAdmin is an extensive and above all, user-friendly software package, with which you can work on and administer addresses, articles and projects. Seizing new customers, changing addresses and article values and removing outdated data can be made at any time in the existing volume of data. Compatibly to Microsoft Office and by means of the unrestricted data transfers of the relational data base are dates, job execution, calculation and reminders to handle storekeeping and much more besides uncomplicated. High performance components ensure simple handling the most different enterprise information and support multiple evaluation possibilities.

ProDesign

**Construction
means
design
and
creation**

ProDesign is the fast, universal tool for your window manufacturing. Speed is not witchcraft.

ProDesign supports you with manufacturing complicated window superstructures. In shortest time you design the interior sight colorfast and true to scale. Besides ProDesign produces detail-true external views e.g. for architects. Automatically measured designs are your base for a wide spread of uses. With various manufacturing lists, customer documents or general overviews you can handle the needs of your enterprise. Manufacturing-relevant data are available for individually shapeable manufacturing lists and labels. The freely definable cost centers and processing steps of your enterprise are basis of your entire calculation. Whether wood, wood-aluminum or plastic windows, independence is the substantial factor for window-constructions and the variety of representation possibilities for all window-systems are nearly endless.

ProView

**Make colours
materials
and
formats
visible**

ProView is a new aid to the digital design of house fronts. A picture says more than thousand words.

ProView is the presentation program, with which you make service a leading product of your enterprise. Offer your customers more than „only“ a good technical consultation. Use the possibilities of digital visualisation. You know your customer, who would like to let his own home shine up new with new gloss, with all of his indecisions. „Do I decide for the windows with the small or large bars? The new fitting for the modern aluminium door in silver or in blue, the color of the house front? No - better the neutral wood version! Or?“ Questions over questions, ProView will help to answer.
